LONDON

Dear Sirs

1. With reference to your application numbered as above, the Examiner (Mr D Eve, 01 248 5070 Ext 21) reports that the language and terminology of the specification are still not clear and consistent, and further amendment seems to be needed to meet the requirements of Section 4 of the Patents Act, 1949. In particular:

a. The word "closed", where still applied (eg on page 11 line 21, page 13 line 10 and page 23 line 2) to the pulp and water systems of the present invention, should be amended to conform with the amendments already made elsewhere, or struck out, as appropriate to each context.

b. The verb "flow", being intransitive, is not consistent with its contexts on page 4 line 4 and page 17 line 19, and should be amended.

c. The sentence on page 6 lines 24-26 is still not clearly related to its context, and is not now clear in itself, since the liquid referred to has not yet been "used in showers". If amended to meet the above objections, it would be redundant. It should apparently have been deleted along with the passage formerly preceding it. This should now be done.

d. The sentence on page 10 lines 4-8 is not clear. If, as still appears and was formerly stated, the coating must be of a particular kind to produce the desired effect, this should be made clear, eg as indicated in pencil.

e. The word "both" is not consistent with its context on page 14 line 23, and should be struck out.

f. The sentences on page 11 lines 10-14, page 14 lines 11-13, page 16 lines 1-4 and page 23 line 25 - page 24 line 4 are still not clear and so do not clearly convey the meaning that is intended. Further amendment or deletion is needed in each case.

g. The minor matters indicated elsewhere should also receive attention.

2. Some of the manuscript amendments already made are not clearly legible and should be made so, by retyping if necessary.

Yours faithfully
